Chromium Process Update

Standard Demolition Services, contractor for the demolition of the Chromium Process site, has officially initiated the demolition phase of the Chromium Process building. We anticipate that building demolition activities will take between 15 to 20 working days. Portions of the building will be recycled and used as fill materials, while specific locations will be removed from site due to their toxic nature.

Traffic flow should not be an issue as there are no plans to close either of the roads that border that property.

Individuals with questions may contact Paul Grimmer, President of Shelton Economic Development Corporation at (203) 924-2521.
